DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of the species of claim 12 in Paper No. 8 is acknowledged. The traversal is on the ground(s) that all of the claimed inventions are sufficiently related to each other to be examined in one patent application. This is not found persuasive because the Examiner did not require restriction between separate inventions, thereby requiring them to be examined in separate applications, but instead required an election of species. If the elected species is found to be allowable (or cancelled), then the search will be expanded so that at least one other species will be examined in the same application. If some or all the species are found to be allowable, then some or all the species will be examined in, and issue from, a single application.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 7-11 and 13-15 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 8.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1756

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 4,847,132 to Takao et al (Takao). Takao discloses a protective layer form an optical information recording medium, wherein the protective layer is exemplified as comprising a mixture of zinc sulfide (corresponding to the basic material of the present invention) and silicon nitride. Furthermore, Takao discloses that the optimum amount of silicon nitride is about 20 mol %. See the abstract and Example 4.
